It is common for every type Seating to have a Break-In Period. This period is generally between a few weeks to a few months.....Depending on the body's unique shape and weight. Expect the Cushion Crown to slightly loose loft, however; this is not an indication that the cushion is failing.....this is normal and should be expected.

In addition, after the cushion has gone through the Break-In period, there may be the presence of "Comfort Wrinkles" that may appear in the Cushion casings....This too is normal and should be expected.
